

Packet Radio and Emergency Communications

Outpost Packet Message Manager

EMCOMMWEST 2009

Reno, NV

2 May 2009

Jim Oberhofer KN6PE

Topics

- 1. Quick introduction to Outpost**
- 2. What's new since 2007**
- 3. What's next... Outpost v2.4**

Quick intro to Outpost

Overview

Outpost Packet Message Manager

What is Outpost?

- A Windows-based packet messaging client
- Supports ARES, RACES, and other amateur radio emergency response teams and their need to pass digital traffic
- Helps automate the packet message handling environment
- Manages all message-handling between you and the BBS
- Lets you read, delete, create, reply to, or forward messages back to the BBS

Overview

Outpost Packet Message Manager

Why use Outpost?

- 1. Leverages the existing packet hardware, network, and BBS infrastructure**
 - Uses your existing TNC and packet radio equipment
 - Compatible with many existing BBSs and TNC PBBSs
 - Only your packet client (end-user program) changes
- 2. Hides the complexity of the packet operating environment**
 - Similar look and feel to contemporary email programs
 - Shorter learning curve for packet operations
 - Allows users to... *“focus on the message, not the medium”*
- 3. Implements most local emergency management policies for digital communications**
- 4. Still under active development based on user requests and on-going alignment with the Outpost mission**

Overview

Outpost Packet Message Manager

Mission

The Outpost *Packet Message Manager* program supports the Emergency Communications Packet User community with a contemporary amateur radio packet messaging client that allows users to focus on the message, and not the medium.

Goal

Help get local ARES/RACES teams on the air with digital messaging using their existing hardware and BBS infrastructure.

Overview

Outpost Packet Message Manager

Feature highlights

- **Message support**
 - Private, NTS, and Bulletin messages
 - Text formatting in a free-form message window
 - NTS Message Maker with ARL message support
 - On-line report builder
- **Send/Receive Session (connection) control**
 - Serial, AGWPE, and Telnet interfacing with over 20 PBBS and BBSs
 - Controls connecting, sending messages to and retrieving messages from the BBS
- **Configurations and Setups**
 - BBS, TNC, and Interface configurations
 - message type and retrieval options
 - supports 3 ways for automatically initiating send/receive sessions

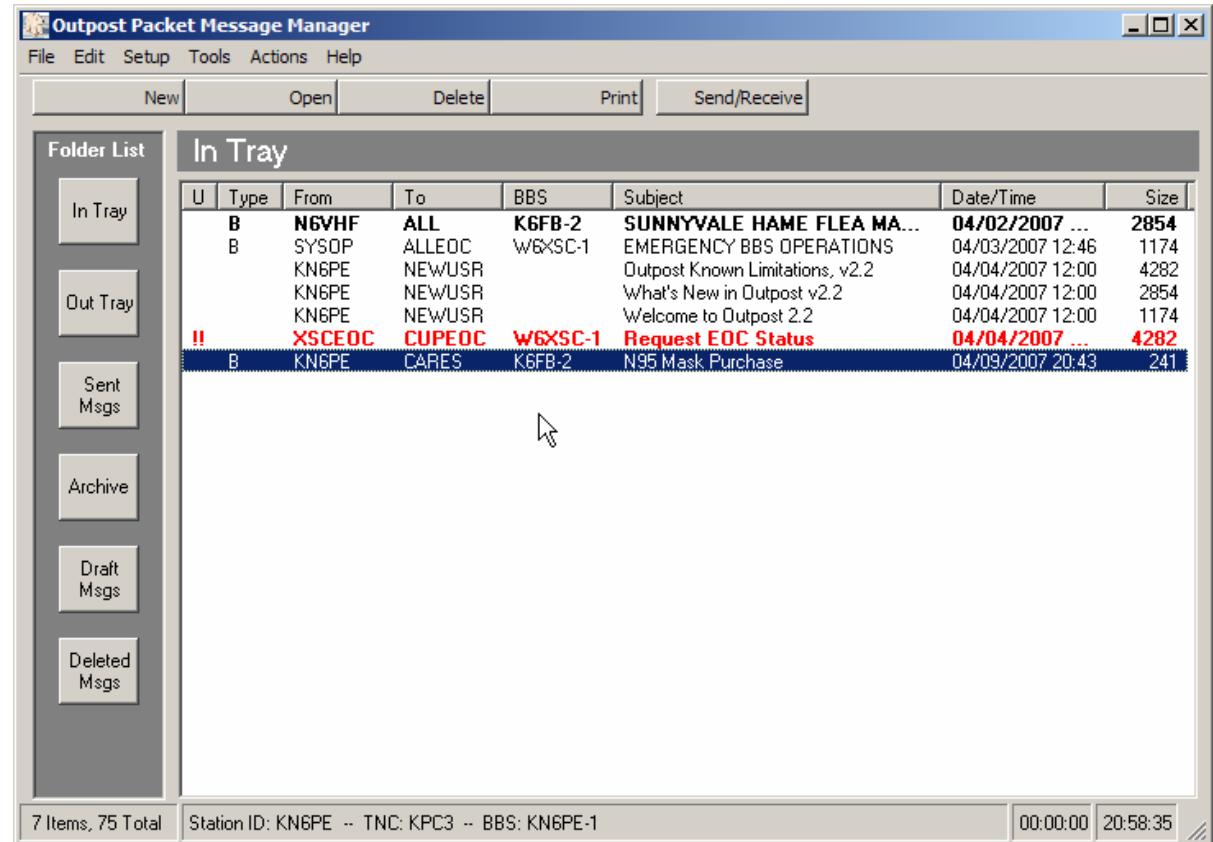

Overview

Outpost Packet Message Manager

Message support

- Familiar email-app look & feel
- Separate folders for message storage
- Clear message identification (unread=**BOLD**, urgent=**Red**)
- Formal message workflow
- BBS and interface setups
- Additional settings control how Outpost behaves

Overview

Outpost Packet Message Manager

Creating Messages

- Supports Private, Bulletin, and NTS message types
- Message formatting before sending
- Set messages to **Urgent**
- Request delivery or read receipts
- Different ways for originating messages
- NTS Message Maker

Overview

Outpost Packet Message Manager

Viewing messages

- Supports viewing, printing, deleting or saving a message to a local file
- Reply and Forward message formatting

The screenshot shows the Outpost Packet Message Manager interface. The main window displays a list of messages in the 'In Tray' folder. The 'Open' button in the toolbar is circled, and an arrow points to the selected message in the list. A secondary window titled 'N95 Mask Purchase - Packet Message' is open, showing the details of the selected message.

Bulletin Message

Bbs: K6FB-2 Sent: 04/09/2007 20:43

From: KN6PE

To: CARES

Subject: N95 Mask Purchase

All Packet-enabled CARES members,

Those CARES members interested in purchasing N95 masks as described by Marsha, please let me know. We will be doing a bulk purchase at a cost of \$1 per mask for CARES members.

Regards,
Jim KN6PE

Outpost How-To's

The Outpost program does not include any online help. Instead, a series of HOW-TO files are provided with the application and are available on-line here. See the [Outpost Users Guide](#) for other details.

Interface How-Tos

1. AGWPE Setup
2. Telnet Setup
3. Telnet Setup with Winlink
4. TNC Command File
5. TNC Setup

BBS/PBBS How-Tos

1. BBS Setup
2. BBS Setup for Santa Clara County RACES
3. Connecting to a local KPC3/KPC9612 PBBS
4. Connecting to a local KPC3/KPC9612 PBBS
5. Connecting to a local MFJ-127X PBBS
6. Connecting to a local PK-232/DSP-232 PBBS
7. Using KA-Node/Netrom (BPQ) Access

Messaging How-Tos

1. Acknowledge Read, send automatically
2. Add a Signature
3. Annunciation
4. Automatic Retrieval
5. Create a message
6. Drag and Drop
7. Forwarding/Replying
8. Numbering messages
9. Online reports
10. Online reports, one-touch loading
11. Printing automatically
12. Requesting Delivery and Read Receipts
13. Retrieving selected bulletins
14. Send as Urgent
15. Sending a text file

Miscellaneous How-Tos

1. Enhanced Channel Monitoring
2. Scripts
3. Tactical Calls

What's new since 2007

What's new since EmCommWest'07?

v2.2c205 (14-May-2007) to present

- 90 enhancements and defect changes, including...
 1. Enhanced BBS support
 2. Various message and control improvements
 3. Improved Comm Port support
 4. Enhanced Channel Monitoring
 5. Scripting
 6. Opdirect & PacForms

All release details are up at www.outpostpm.org

1. Enhanced BBS Support

Current list of supported BBSs (January 2009)

PBBSs (TNC Firmware-based)	BBSs (Software-based)	Support requested and pending
KPC2, KPC3, KPC3+ KPC9612 KAM, KAM-XL, KAM-98, KAM Plus, KAM-4 Data Engine (Kantronics) PK-88, PK-232 DSP-232 MFJ-1270x, -1278	AA4RE DXNET F6FBB HAMSERV JNOS, SNOS, TNOS MSYS N0ARY NNA Winlink: RMS & CMS WORLI	Kenwood D-700* MFJ-1274 MFNOS* PK-96* OpenBCM * Recently added

- See <http://www.outpostpm.org/bbs/> for...
 - Updates to the list of supported BBSs
 - Instructions on how to get your BBS supported

Overview

Outpost Packet Message Manager

Types of controls

- Controls the flow of Send/Receive Sessions
- Sets how messages are created and handled
- Set various data fields to automatically populate on-line reports and messages
- Set up default directory names
- Various log settings
- Outpost Scripting
- Form sizing controls
- Separate Interactive Packet Windows for...
 - Serial TNCs
 - AGWPE
 - Telnet

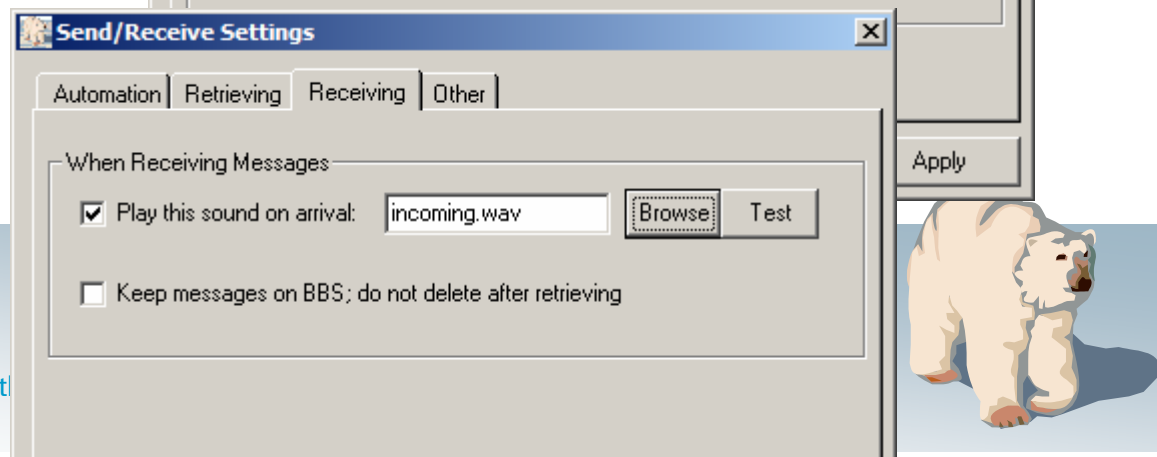

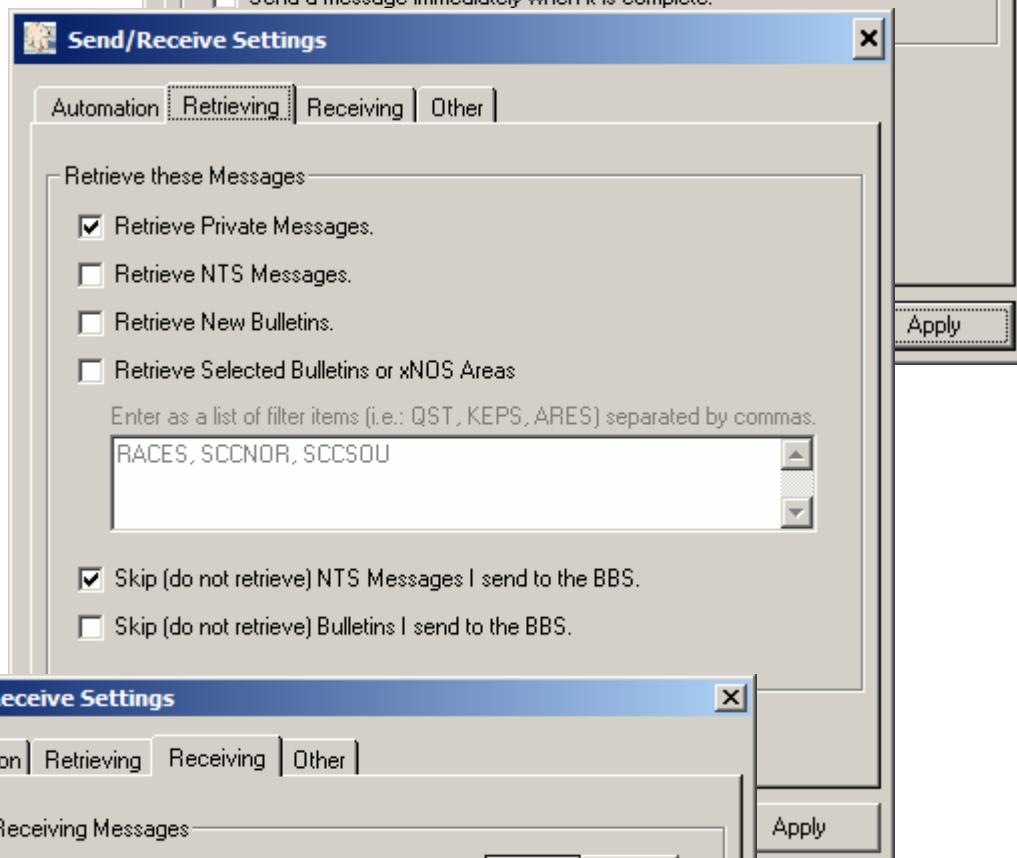

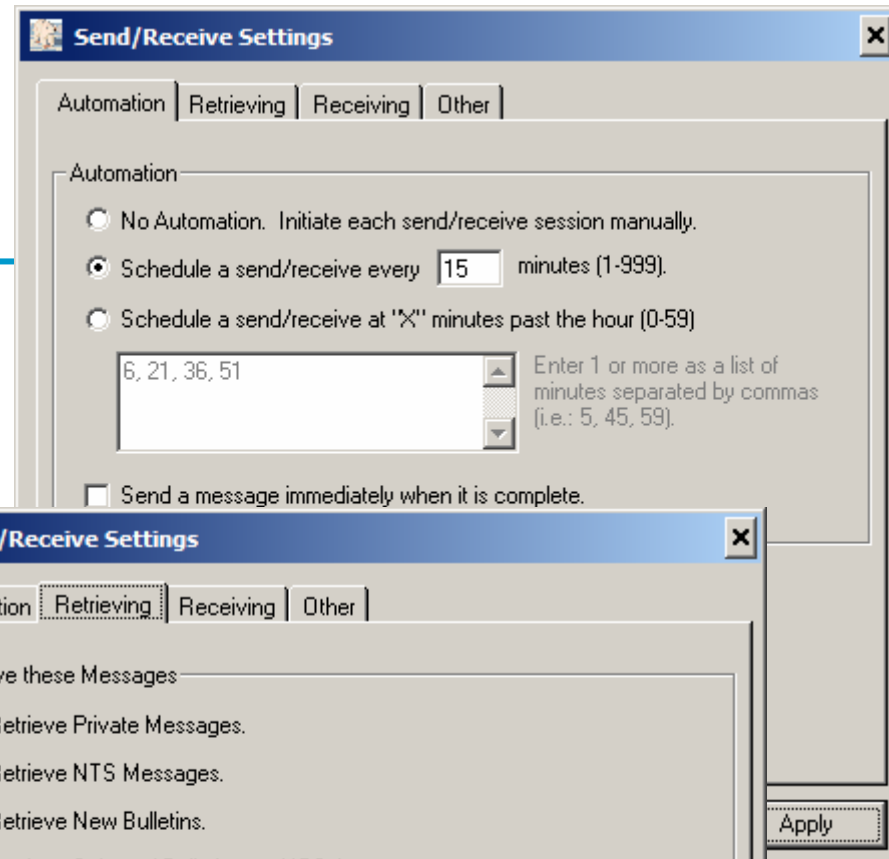

2. General controls

Recent Changes

Send/Receive Settings

- Selects different ways to automate the message send/retrieve sessions
- Select message types to be retrieved
 - New Expanded Filters
- What to do with received messages
- Additional controls (Other Tab) manage printing messages, Alerts, and other controls

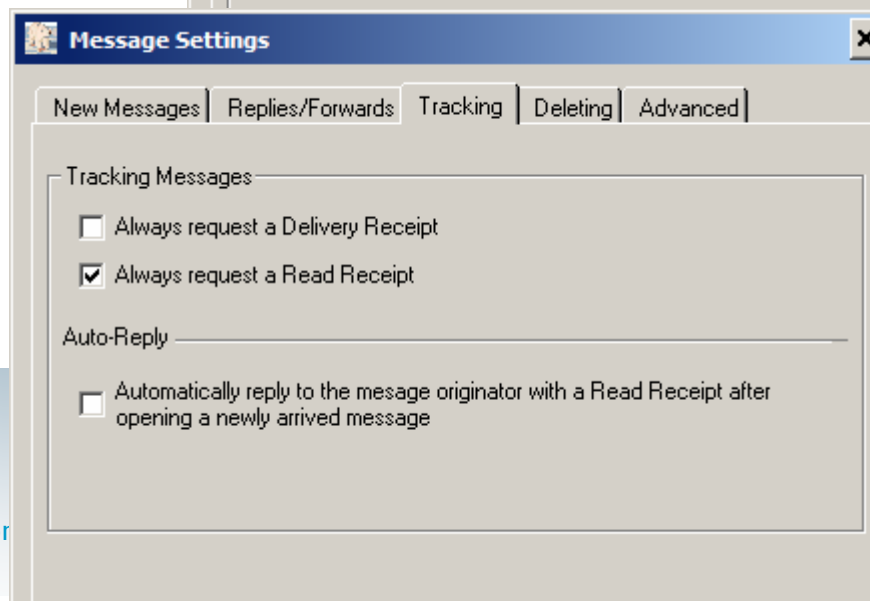

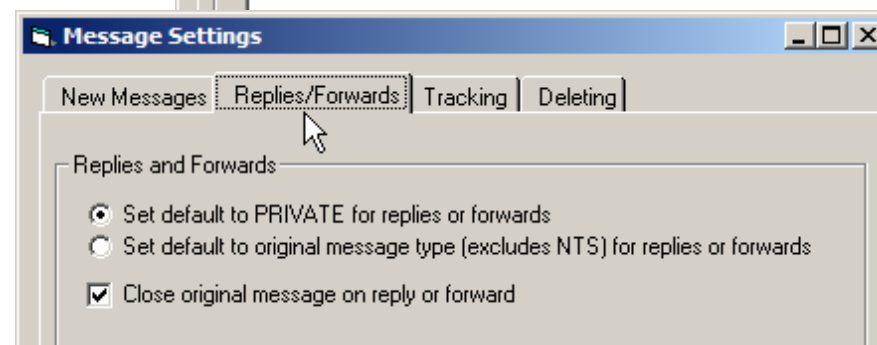

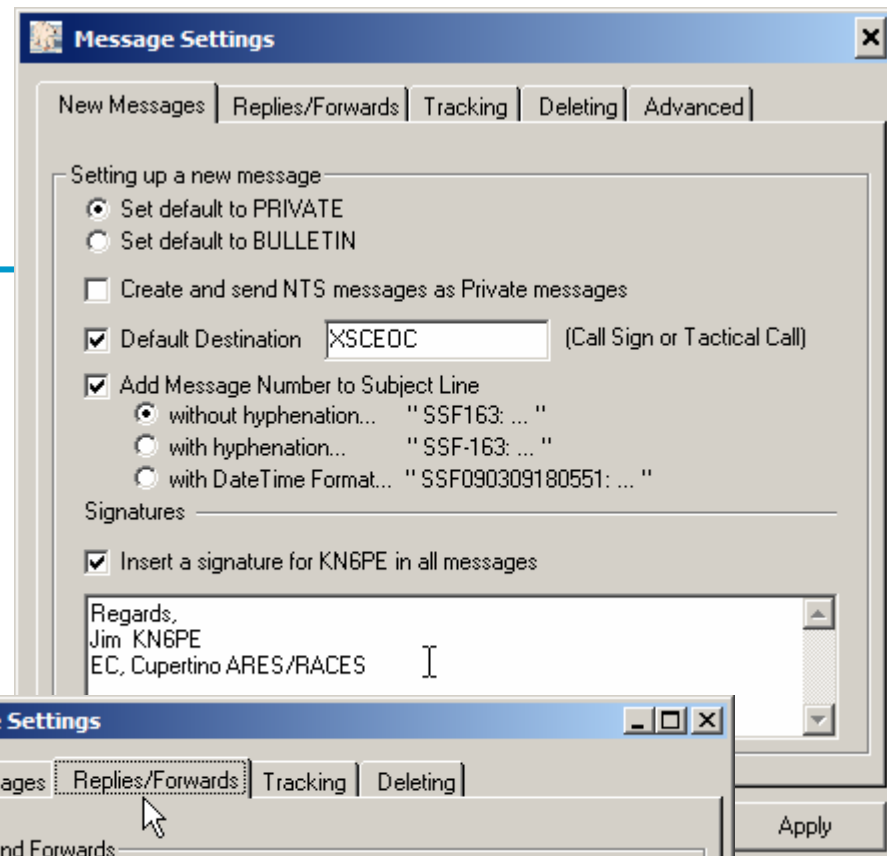

2. General controls

Recent Changes

Message Settings

- Settings for new messages, includes
 - New NTS handling, Msg Labels
 - Default destinations
 - Auto message numbering
 - Add a Signature
- Handling replies and forwards
- Set defaults for requesting message receipts
- Setting for permanently deleting messages

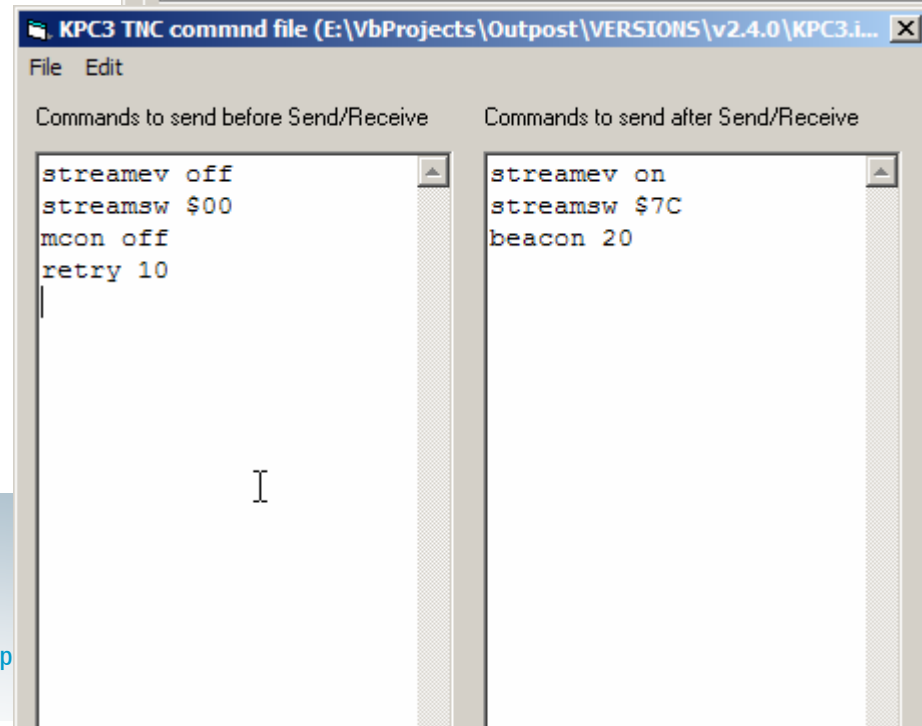

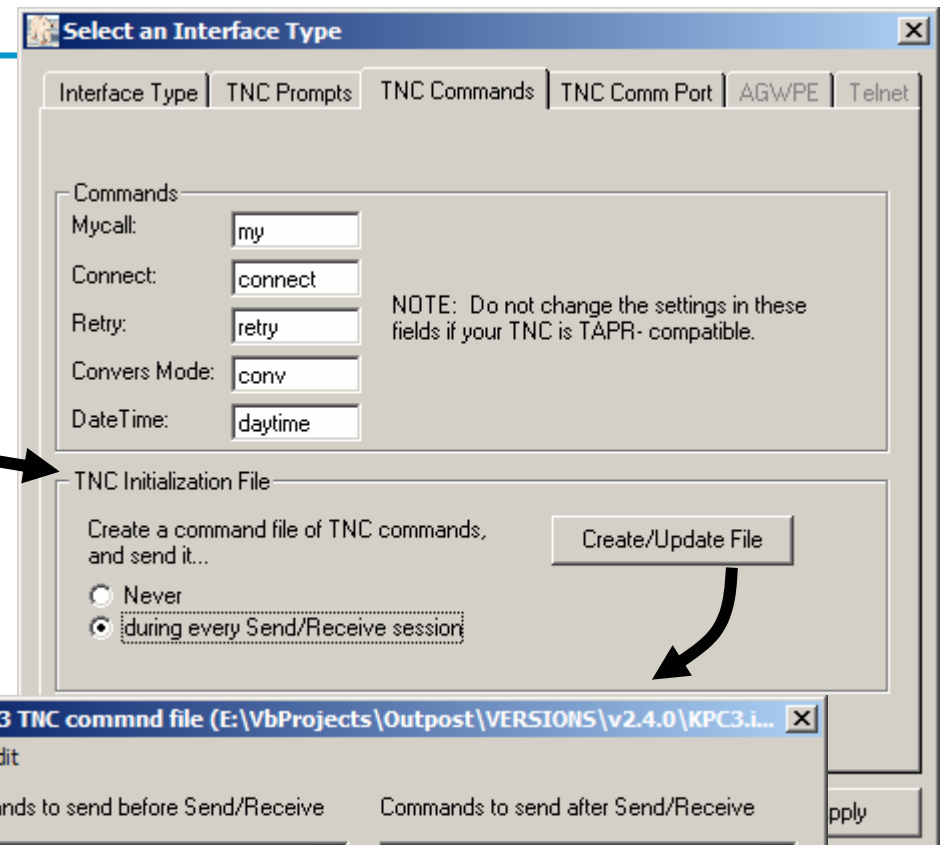

3. Improved Comm Port support

Recent Changes

#682: Adds TNC Initialization file capability. Allows the user to define a list of TNC commands to be sent to the TNC both prior to a BBS connect and immediately after a disconnect.

#720: Identifies and shows all virtual Comm Ports. Identifies exactly what comm ports exist.

#607: Adds capability for Ipserial.exe to export a current interface configuration to Outpost.

4. Enhanced Channel Monitoring

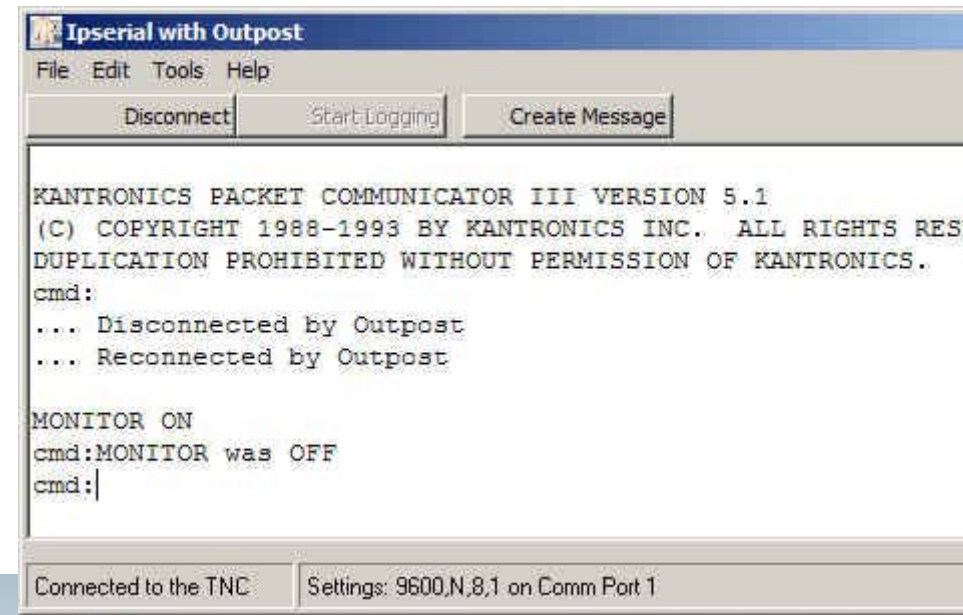

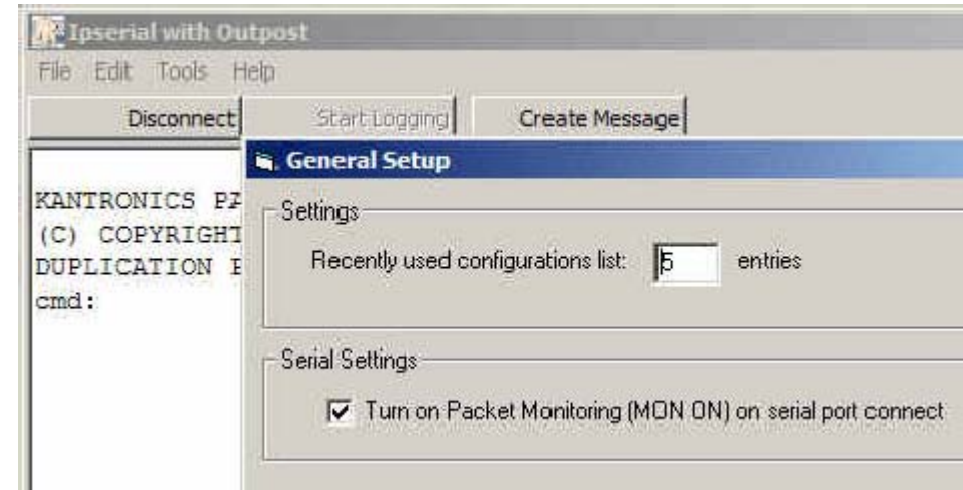

Recent Changes

The Problem

1. Users want to monitor the packet channel in between Outpost sessions
2. However, 2 apps cannot access a comm port at the same time

The Solution

1. Run Ipserial.exe; from Outpost, select **Tools > Interactive Packet > Serial/Comm Port**.
2. From Ipserial.exe, **Tools > Options**, then check the box titled "**Turn on Packet Monitoring (MON ON) on serial port connect**". Press **OK**.
3. When Outpost runs Send/receive, it ...
 - (i) first tells Ipserial.exe to disconnect
 - (ii) runs Send/Receive Session, then,
 - (iii) tells Ipserial.exe to reconnect

5. A tour of Outpost Scripting

Recent Changes

The problem

1. Users have requested additional capabilities with Outpost that just didn't make sense to add to the core Outpost application, such as...
 - Automatically poll a series of BBSs, one after another
 - Send the same message to several BBSs
 - Detecting a text file on the PC and send it as a message to a BBS
 - Finding and doing something with a message that is received by Outpost
2. Needed a different approach that would let users take advantage of the Outpost capabilities without...
 1. Over-complicating the Outpost program, and
 2. constraining the creative ideas that Outpost users have

A tour of Outpost Scripting

Recent Changes

What is Outpost Scripting

1. The means for users to write their own logic to manipulate the *entire* Outpost messaging environment
2. It is made up of 4 things:
 - **Outpost Scripting Language (OSL).** A series of statements and commands that lets you develop your own messaging process flow based on your particular needs.
 - **Outpost Script Compiler.** The OSL compiler reads the OSL script and produces a "virtual machine language" output for subsequent processing. When run, it reports either a *Pass* or a *Fail*.
 - **Outpost Virtual Machine.** Runs the compiled script.
 - **Outpost Scripting Window.** All scripting capabilities - editing, compiling, and running - are managed by the Outpost Scripts program called Opscripts.exe.

A tour of Outpost Scripting

Recent Changes

Outpost Scripting Language Capabilities

Best understood by spending time running through the tutorials located here...

<http://www.outpostpm.org/scripts>

1. Basic introduction to scripts
2. OSL components
3. Playing with text strings
4. Arithmetic operations
5. Looping forever
6. Conditional looping
7. Other conditional operations
8. Send/Receive sessions
9. Creating messages (outside of Outpost)
10. Working with received messages
11. File Manipulation
12. Interacting with the outside world

The OSL statements

General Functions and Statements

Beep	Plays a beep on the PC speaker
Begin	Required; Marks the beginning of the script
Clear	Clears the runtime Monitor Display
End	Required; Marks the end of the script
If... Then... Else	Conditional check
Loop... EndLoop	Unconditional loop
OnError	Determine how to proceed in the event an error occurs
Pause()	Causes the script to pause
Play()	Plays a .wav file
Print()	Prints a line of text to the Runtime Monitor window
Run()	Run a program, does not wait for it to complete
Runw()	Run a program, waits for it to complete
Script	Required; Identifies this file as a script
SendReceive	Initiates an Outpost Send/Receive session
Var	Defines a user variable
While.. EndWhile	Conditional loop

File Functions

Delete()	Deletes a file
Exists()	Tests if a file exists
FindFile()	Sets up to find matches to a file mask
GetFileName()	Returns the file name only from a full path file string
MoveFile()	Moves a file to a different directory
NextFile()	Gets the next file that matches a file mask
ReadFile()	Read a file content
ValidFileName()	Creates a valid file name from path and name elements
WriteFile()	Writes text to a named file

The OSL statements

String Functions

FindWord()	Sets up to find matches to a comma-delimited string
NextWord()	Gets the next word in a comma-delimited string
Len()	Returns the length of a string

Message Statements and System Variables

CreateMessage	Creates an Outpost message based on parameters
BBS	Holds the BBS name
FROM	Holds the FROM address
TO	Holds the TO address
SUBJECT	Holds the Subject of the message
MESSAGE	Holds the body of the message
MTYPE	Holds the message type
FindMessage()	Searches Outpost for a message
MoveMessage()	Moves an Outpost message to a different folder
NextMessage()	Gets the next Outpost message that matches the search

Send/Receive Statements and System Variables

SendReceive	Initiates an Outpost Send/Receive Session
BBS	Holds the BBS name
TNC	Holds the TNC name
MYCALL	Holds the Station Identifier (Call Sign)
TACCALL	Holds the Tactical Call
RETRIEVE	Holds what message types to be retrieved
FILTER	Holds the categories for a Filter Retrieve

Other System Variables

TRUE, FALSE	Value against which conditions can be checked
ON, OFF	Value that can be used to set items
CRLF	Value that causes a carriage return/Line feed on output

The Opscripts.exe program

1. Single program that manages editing, compiling, and runtime monitoring
2. Scheduled from Outpost (Tools > Scripting) or double-click on the program.
3. When referencing BBSs or TNCs, they previously must be defined in Outpost!

Sample script #1

SCRIPT

```
\ *****
\ Description: Loop on 2 BBSs. This script will continuously loop
\ on these 2 BBSs. To exit the loop, press the STOP button on
\ the Run Monitor Form.
\ Author:      Jim KN6PE
\ Revision:    08/05/08 Original
\ *****
```

BEGIN

```
MYCALL = "KN6PE"           \ check for my personal messages
TNC = "GARAGE-TNC"        \ use this TNC for all runs
```

LOOP

```
Print(CRLF & "Checking the K6FB-2 PBBS...")
BBS = "K6FB-2"           \ check the Las Cumbres ARC PBBS
RETRIEVE = "PB"         \ retrieve Private and Bulletins
SENDRECEIVE
```

```
PAUSE(5)                 \ Pause 5 seconds...
```

```
Print(crlf & "Checking the W6SJC-1 BBS...")
BBS = "W6SJC-1"         \ check the San Jose RACES F6FBB BBS
RETRIEVE = "PF"        \ retrieve Private and Filtered msgs
FILTER = "RACES:SCCNOR:SCCSOU"
SENDRECEIVE
```

```
PAUSE(600)              \ Pause 10 minutes...
ENDLOOP                 \ ... then repeat
```

END

Sample script #2

SCRIPT

```
\ *****  
\ Description: Post a H&W message to the BBS every 4 hours  
\ Author:      Jim KN6PE  
\ Revision:    08/05/08 Original  
\  
\ *****
```

BEGIN

MYCALL = "KN6PE"

TNC = "GARAGE-TNC"

BBS = "K6FB-2"

RETRIEVE = "PB" \retrieve Private and Bulletins

LOOP

Print(crlf & "Creating and sending a H&W message...")

FROM = "KN6PE"

TO = "W6TDM"

SUBJECT = "H&W Check Message"

MESSAGE = "Allan, system is still running. 73, Jim"

MTYPE = "Private"

CREATEMESSAGE

SENDRECEIVE

PAUSE(60*60*12) \ Pause for 12 hours (60*60*12=14400 seconds)

ENDLOOP

END

Reports of Scripting applications

Two ways that people are using Scripting

1. SoCal: 24 hospitals and EOCs registered in @winlink.org email with their tactical call signs. Once a month at home, user sends a message (via Telnet) with the tactical call signs so that Winlink.org won't let them go dormant.
2. Ontario: Has a RMS packet bridge and a number of other BBSs on the network; polls these nodes in turn.

Outpost Scripting

Before you begin...

... a few things to consider

1. You must be familiar with setting up Outpost, creating messages and initiating Send/Receive Sessions with a BBS.
2. Having some programming background helps, but is not required. Step through the entire ***Tutorial Series***, enter all examples, and play with them; get creative!!!
3. OSL is not C++, Pascal, FORTRAN, Visual Basic, or any other language. You will see similarities as well as differences.
4. Error handling will evolve. Most of the errors are trapped and reported, however, it is not yet 100% foolproof.
5. Finally, OSL is evolving. If you have an idea that you think would further enhance the usefulness of Outpost Scripting, let me know.

6. Supporting the EOC

Recent Changes

Emergency Operations Center

- Central command and control facility responsible for emergency or disaster management functions
- Responsible for the strategic overview, or "big picture", of the disaster
- The first most critical component of an EOC is the individuals who staff it
- The second most critical component of an EOC is its communications systems
- Most municipalities use ARES/RACES groups for their primary or secondary communications channels

ICS-213

General Message Form

- Originally designed as a multipart self-copying form for use as an interoffice memo.
- Increasingly used for messages between parties who are not in the same location.
- The form is often originated in one location and transmitted electronically to another location.
- Replies are returned electronically and the two "parts" of the form are matched together.
- Incident messaging, message documentation, and transmission are being adapted to include emerging needs and best practices.

Source: <http://ics213.com/>

Supporting the EOC

Recent Changes

If ICS-213 is what the OES uses, how do we tighten the alignment between what ARES/RACES Teams have to offer with their needs?

How do we support the passing of situational awareness information and strategic orders?

What are the opportunities?

Adding an ICS-213 form to Outpost is one of the more frequent asked-for requests

However, everyone's got an opinion on how ICS-213 should look

PacFORMS

Santa Clara County RACES

ICS-213 in Santa Clara County

- Santa Clara County OES required a backup means to pass RIMS messages; Packet Radio was the logical choice
- County RACES also needed more standard means for soliciting and collecting information from the cities
- **PacForms** are web-based forms that can be deployed to the EOC staff for quick data entry
- Message can be saved to a file or passed directly to **Outpost** using **Opdirect MCS**

Opdirect MCS (Message Capture System)

Introduction

What is Opdirect.exe?

- An external program
- Listens for and receives messages from remote sources, such as SCC's ICS-213, by a WinSock connection
- Processes and writes a message to the Outpost message DB
- Requires the Outpost Operator to complete the message and then press "send."

Listens to...
Host: LocalHost (127.0.0.1)
Port: 9334

Outpost-formatted
message

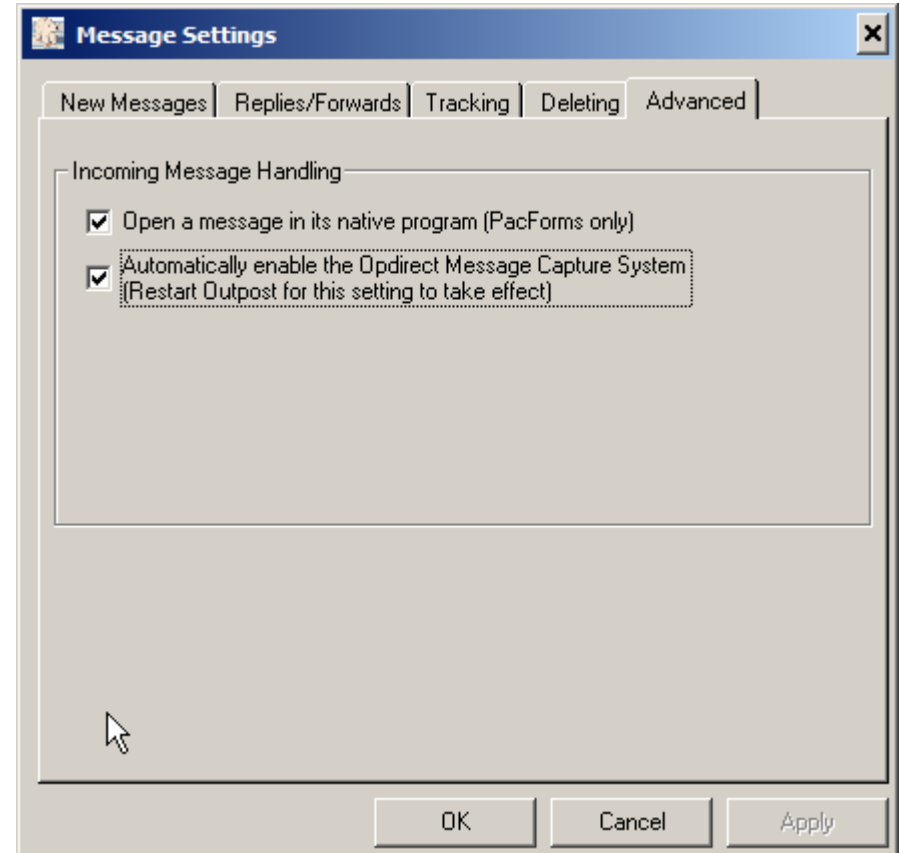

Opdirect MCS

Introduction

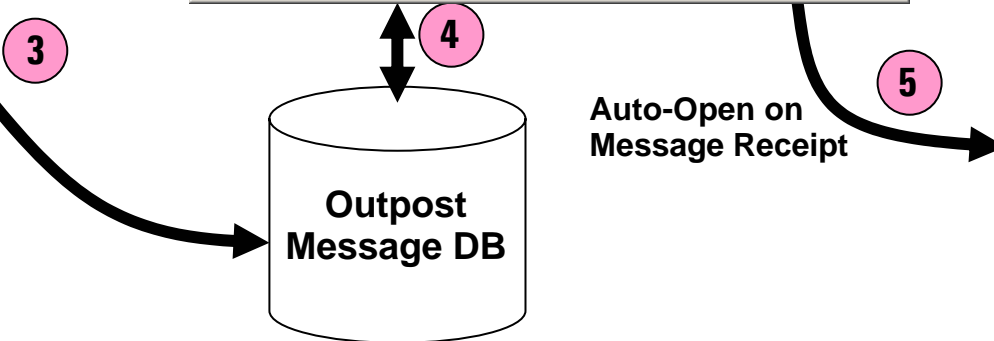

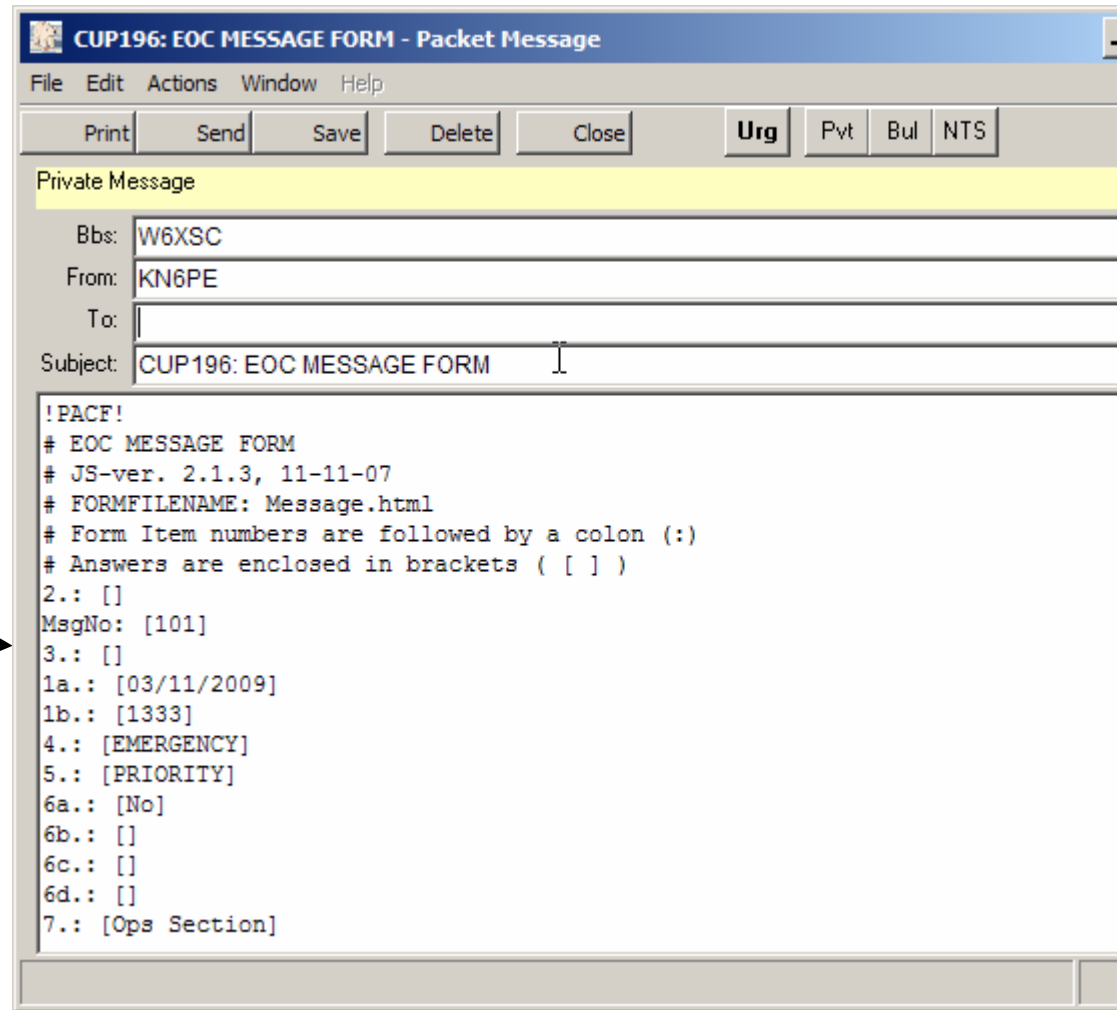

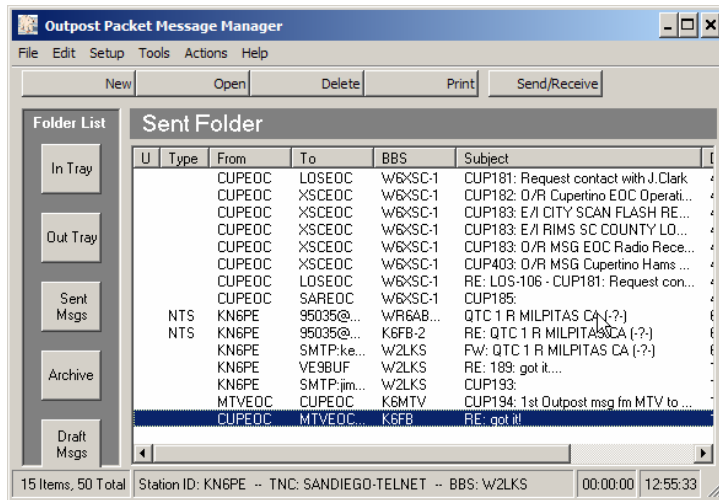

Starting Opdirect.exe

- From Outpost,
Tools > Message Settings,
Advanced Tab
- Currently, controls to schedule
Opdirect.exe on Outpost startup

PacFORMS and Opdirect MCS

Processing SCC's online EOC Message Form

PacFORMS and Opdirect MCS

Implementation Details

- Opdirect.exe is part of the standard Outpost distribution
- Three forms are available (<http://www.scc-ares-races.org/pfpublic/pacforms.html>)
 - ICS 213 Message form (**Message.html**)
 - "City-Scan" Flash Report (**city-scan.html**, to report current status of the city after an emergency has happened)
 - Logistics Request Form (**logistics-request.html**, to request logistics support from the county)
- Supports a “reverse read” capability to re-assemble the messages back into human-readable form
- Must be deployed on the **same PC as Outpost** for direct message integration with Outpost
- Can be deployed on a memory stick to the EOC Staff for message entry and file creation

What's next...

Outpost v2.4

What's next... Outpost v2.4

other planned additions

1. Address book

- Distribution Lists

2. Scripting

- Startup automation; kick off a script when you first run Outpost
- Load and go: run a script directly from Outpost

3. various changes

- Clone BBS and TNC configs
- Node access to Xconnect, BBS commands
- Fix to 7 bugs, Adds ~15 enhancements

4. ICS-213 Message Maker

ICS-213 Message Maker

What's coming

- A generic ICS-213 general message form
- Supports local message management
- Message delivery to Outpost by Opdirect.exe
- Can exist anywhere on the same LAN as the Outpost PC

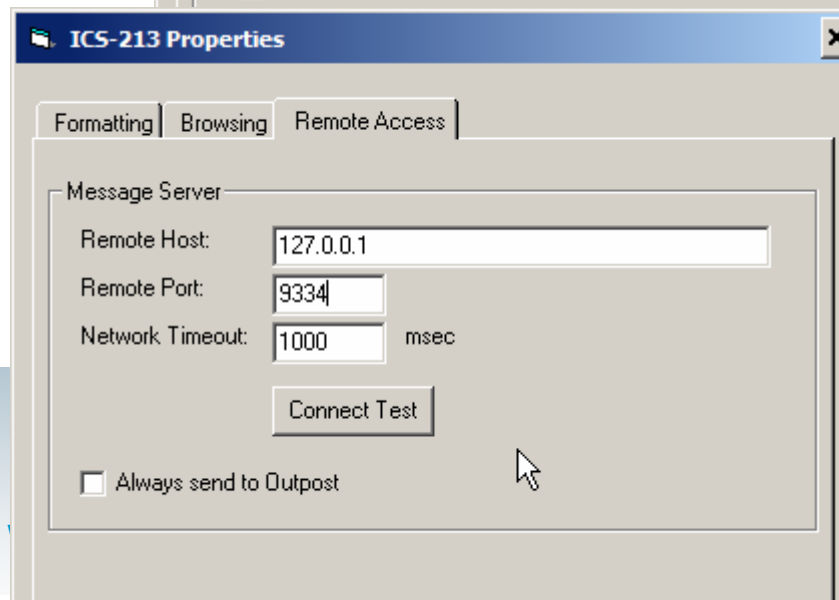

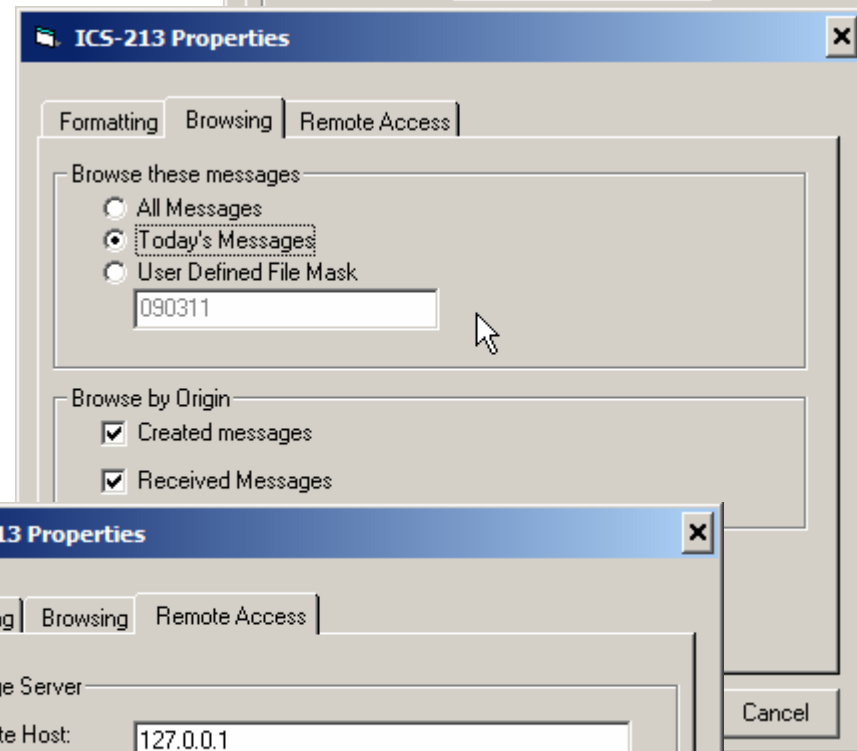

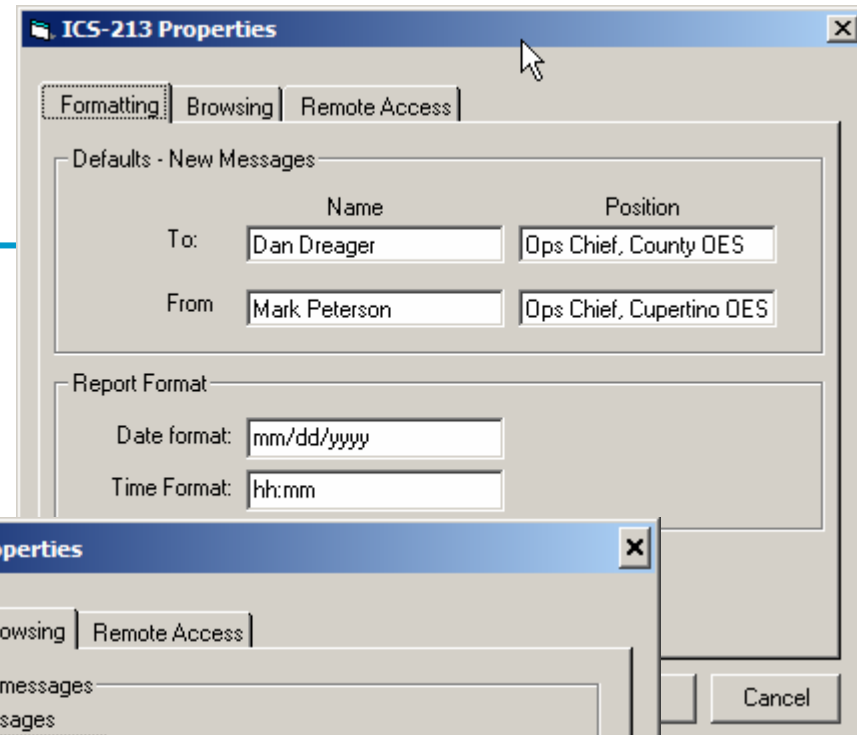

The screenshot shows the 'ICS-213 Message Maker - PROTOTYPE' application window. The title bar includes standard window controls. The menu bar contains 'File', 'Edit', and 'Help'. Below the menu bar is a toolbar with buttons for 'New', 'Reply', 'Save', 'Cancel', 'Browse', '<<', '>>', and 'Edit'. A yellow highlighted status bar displays 'Msg# 26, Originated Message, Status is New'. The main form is divided into two sections: 'Message' and 'Reply'. Each section contains input fields for 'To:', 'From:', 'Subject:', 'Position:', 'Date:', and 'Signature:'. The 'Message' section has a large text area with a vertical scrollbar and a cursor. The 'Reply' section also has a large text area with a vertical scrollbar. At the bottom of the window, there is a status bar with 'ICS-213 Message Entry' on the left, 'Disconnected' in the middle, and '22:47:51' on the right.

ICS-213 Message Maker

Configuration Options

- File > Properties...
- Formatting... set date, time and From: and To: defaults
- Browsing... lets you look for a message saved, sent, or received.
- Remote Access... the network parameters describing where to find Outpost

ICS-213 Message Maker

Processing an ics213mm message

Pressing New...

- Fills in the defaults...
To:, From:, Date, and Time
- Sets the Signature to the Sender (From:), can be changed
- You fill in the...
 - Subject
 - Message

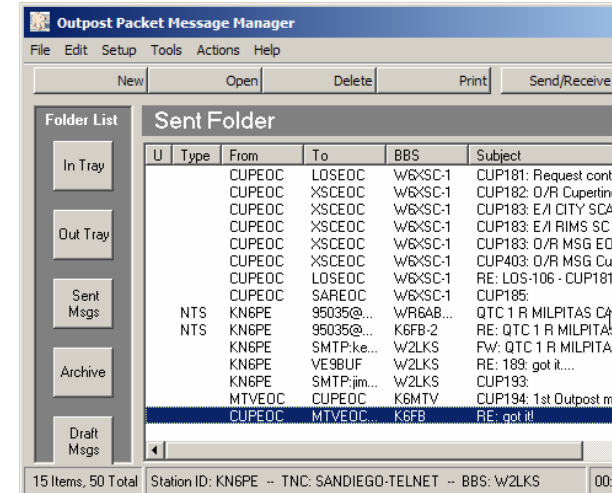

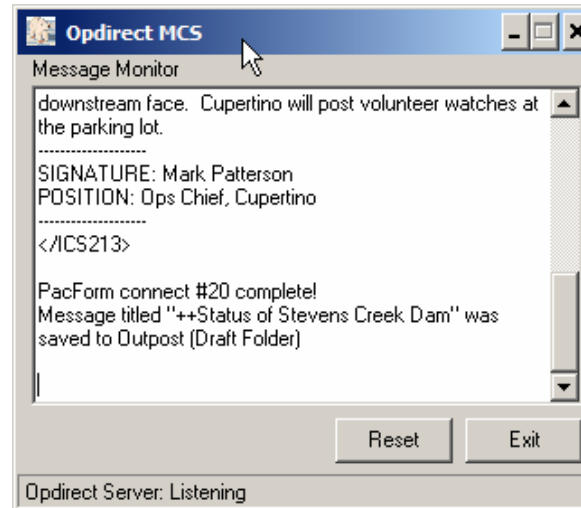

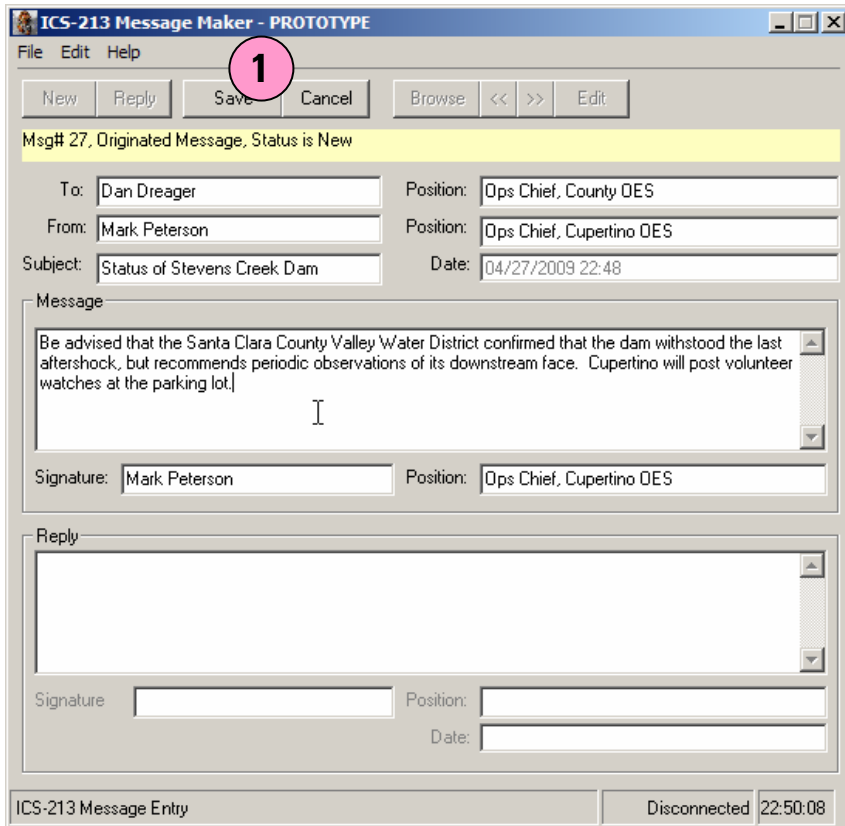

The screenshot shows the 'ICS-213 Message Maker - PROTOTYPE' application window. The title bar includes standard window controls. The menu bar contains 'File', 'Edit', and 'Help'. Below the menu bar is a toolbar with buttons for 'New', 'Reply', 'Save', 'Cancel', 'Browse', '<<', '>>', and 'Edit'. The main area displays 'Msg# 26, Originated Message, Status is New' on a yellow background. Below this, there are input fields for 'To:' (Dan Dreager), 'From:' (Mark Peterson), 'Subject:', 'Position:' (Ops Chief, County OES), 'Position:' (Ops Chief, Cupertino OES), and 'Date:' (04/27/2009 22:46). A large text area labeled 'Message' is empty. Below the message area are fields for 'Signature:' (Mark Peterson) and 'Position:' (Ops Chief, Cupertino OES). A 'Reply' section is also visible, with empty fields for 'Signature', 'Position', and 'Date'. The status bar at the bottom shows 'ICS-213 Message Maker Ready', 'Disconnected', and the time '22:47:14'.

ICS-213 and Opdirect MCS

ICS-213 and Opdirect MCS

Processing an ics213mm message

ICS-213 and Opdirect MCS

Summary

Features

- Keeps the focus on the message
- Originates new messages
- Receives new messages and create replies
- Produces a readable ICS213 message outside of Outpost
- Deployable anywhere on the same LAN as Outpost
- Supports multiple remote instances

Barriers

- Some Municipalities do not allow PCs on their network that are connected to an external network (Packet?!?!!) or that are not owned PCs (RACES)
- If your packet machine is on the EOC LAN, congratulations!
- If not...consider your own EOC/Radio Room LAN/subnet

ICS-213 and Opdirect MCS

Leveraging Local Area Networks

Wi-Fi capable residential gateway / router

- The device is capable of sharing Internet connections among several computers via 802.3 Ethernet and 802.11b/g wireless data links.
- Look for one with wired and wireless (need to be wired to configure)
- Can co-exist with other wireless environments
- Configure with a unique SSID (Network name, i.e.: CARESEOC)
